FR Pour une utilisation sûre, il est de votre responsabilité de : • Lire attentivement tous les documents contenus dans le CD joint avant la mise en service de l'équipement, • D'installer, d'utiliser, d'entretenir et de réparer l'équipement conformément aux préconisations de SAMES KREMLIN ainsi qu'aux réglementations nationales et/ou locales, • Vous assurez que les utilisateurs de cet équipement ont été formés, ont parfaitement compris les règles de sécurité et qu'ils les appliquent.	UK To ensure safe use of the machinery, it is your responsibility to: • Carefully read all documents contained on the enclosed CD before putting the machinery into service, • Install, use, maintain and repair the machinery in accordance with SAMES KREMLIN's recommendations and national and/or local regulations, • Make sure that the users of the machinery have received proper training and that they have perfectly understood the safety rules and apply them.	DE Eine sichere Nutzung setzt voraus, dass Sie: : • alle in der CD enthaltenen Dokumente vor der Inbetriebnahme der Anlage aufmerksam lesen, • die Anlage im Einklang mit den Empfehlungen von SAMES KREMLIN sowie mit den nationalen und/oder lokalen Bestimmungen installieren, verwenden, warten und reparieren, • sich vergewissern, dass die Nutzer dieser Anlage angemessen geschult wurden, die Sicherheitsbestimmungen verstanden haben und sie anwenden.
ES Para una utilización segura, será de su responsabilidad: • leer atentamente todos los documentos que se incluyen en el CD adjunto antes de la puesta en servicio del equipo, • instalar, utilizar, efectuar el mantenimiento y reparar el equipo con arreglo a las recomendaciones de SAMES KREMLIN y a la normativa nacional y/o local, • cerciorarse de que los usuarios de este equipo han recibido la formación necesaria, han entendido perfectamente las normas de seguridad y las aplican.	IT Per un uso sicuro, vi invitiamo a: • leggere attentamente tutta la documentazione contenuta nel CD allegato prima della messa in funzione dell'apparecchio, • installare, utilizzare, mantenere e riparare l'apparecchio rispettando le raccomandazioni di SAMES KREMLIN, nonché le normative nazionali e/o locali, • accertarvi che gli utilizzatori dell'apparecchio abbiano ricevuto adeguata formazione, abbiano perfettamente compreso le regole di sicurezza e le applichino.	PT Para uma utilização segura, é da sua responsabilidade: • Ler atentamente todos os documentos incluídos no CD em anexo antes de pôr o equipamento em funcionamento, • Proceder à instalação, utilização, manutenção e reparação do equipamento de acordo com as preconizações de SAMES KREMLIN, bem como com outros regulamentos nacionais e/ou locais aplicáveis, • Assegurar-se que os utilizadores do equipamento foram devidamente capacitados, compreenderam perfeitamente e aplicam as devidas regras de segurança.
NL Voor een veilig gebruik dient u: • alle document op de bijgevoegde cd aandachtig te lezen alvorens het apparaat in werking te stellen, • het apparaat te installeren, gebruiken, onderhouden en repareren volgens de door SAMES KREMLIN gegeven aanbevelingen en overeenkomstig de nationale en/of plaatselijke reglementeringen, • zeker te stellen dat de gebruikers van dit apparaat zijn opgeleid, de veiligheidsregels perfect hebben begrepen en dat zij die ook toepassen.	SE För en säker användning av utrustningen ansvarar ni för följande: • Läs noga samtliga dokument som finns på den medföljande cd-skivan innan utrustningen tas i drift. • Installera, använd, underhåll och reparera utrustningen enligt anvisningarna från SAMES KREMLIN och enligt nationella och/eller lokala bestämmelser. • Försäkra er om att användare av denna utrustning erhållit utbildning, till fullo förstått säkerhetsföreskrifterna och tillämpar dem.	FI Käytön turvallisuuden varmistamiseksi velvollisuutesi on: • Lukea huolella kaikki CD:llä olevat asiakirjat ennen laitteiston käyttöönottoa, • Noudattaa laitteiston asennuksessa, käytössä, kunnossapidossa ja huollossa SAMES KREMLIN in suosituksia sekä kansallisia ja/tai paikallisia määräyksiä, • Varmistaa, että laitteiston käyttäjät ovat koulutettuja ja ymmärtävät täysin turvallisuusmääräykset ja miten niitä sovelletaan.
PL Dla zapewnienia bezpiecznego użytkowania na użytkownika spoczywa obowiązek: • Uważnego zapoznania się ze wszystkimi dokumentami znajdującymi się na załączonej płycie CD przed pierwszym uruchomieniem urządzenia, • Instalowania, użytkowania, konserwacji i naprawy urządzenia zgodnie z zaleceniami firmy SAMES KREMLIN oraz z przepisami miejscowymi, • Upewnienia, że wszyscy przeszkoleni użytkownicy urządzenia zrozumieli zasady bezpieczeństwa i stosują się do nich.	CS Pro bezpečné používání jste povinni: • Před uvedením zařízení do provozu si pozorně přečíst veškeré dokumenty obsažené na příloženém CD, • Nainstalovat, používat, udržovat a opravovat zařízení v souladu s pokyny firmy SAMES KREMLIN a s národními a/nebo místními legislativními předpisy, • Ujistit se, že uživatelé tohoto zařízení byli vyškoleni, že dokonale pochopili bezpečnostní pravidla a že je dodržují.	SL Za varno uporabo ste dolžni: • natančno prebrati vse dokumente na CD pred zagonom stroja, • instalirati, uporabljati, vzdrževati in popravljati opremo po določilih SAMES KREMLIN in v skladu z veljavnimi nacionalnimi in/ali lokalnimi predpisi, • poskrbeti, da so uporabniki te opreme ustrezno usposobljeni, poznajo varnostne predpise in da jih upoštevajo.
SK V záujme bezpečného je vašou povinnosťou: • pozorne si prečítať všetky dokumenty obsiahnuté na príloženom CD predtým, ako zariadenie uvediete do prevádzky, • nainštalovať, používať, udržiavať a opravovať zariadenie v súlade s odporúčaniami spoločnosti SAMES KREMLIN a národnými a/alebo miestnymi predpismi, • uistiť sa, že používatelia tohto zariadenia boli zaškolení, riadne porozumeli pravidlám bezpečnosti a používajú ich.	HU A biztonságos használat érdekében az Ön felelőssége, hogy: • a berendezés üzembe helyezése előtt figyelmesen elolvassa a mellékelt CD által tartalmazott összes dokumentumot, • a berendezést a SAMES KREMLIN ajánlásainak valamint a nemzeti és/vagy helyi szabályozásoknak megfelelően helyezze üzembe, használja, tartsa karban és javítsa, • megbizonyosodjon róla, hogy a berendezés felhasználói képzettek, tökéletesen megértették és alkalmazzák a biztonsági előírásokat.	RO Pentru o utilizare sigură, este responsabilitatea dvs. să: • Citiți cu atenție toate documentele de pe CD-ul anexat, înainte de punerea în funcțiune a echipamentului, • Instalați, utilizați, întrețineți și reparați echipamentul conform instrucțiunilor SAMES KREMLIN precum și reglementărilor naționale și/sau locale, • Vă asigurați că utilizatorii acestui echipament au fost instruiți, au înțeles perfect regulile de securitate și le aplică integral.

1. SAFETY INSTRUCTIONS

GENERAL SAFETY INSTRUCTIONS

CAUTION : The equipment can be dangerous if you do not follow our instructions concerning installation and servicing described in this manual and in accordance with applicable European standards and local national safety regulations.

Please carefully read all the instruction literature before operating your equipment.

Only trained operators can use the equipment.

The foreman must ensure that the operator has understood the safety instructions for this equipment as well as the instructions in the manuals for the different parts and accessories.

Read carefully all instruction manuals, label markings before operating the equipment.

Incorrect use may result in injury. This equipment is for professional use only. It must be used only for what it has been designed for. Never modify the equipment. The parts and accessories supplied must be regularly inspected. Defective or worn parts must be replaced.

Guards (motor cover, coupling shields, connectors,...) have been designed for a safe use of the equipment.

The manufacturer will not be held responsible for bodily injury or failure and / or property damage due to destruction, the overshadowing or the partial or total removal of the guards.

Never exceed the equipment components' maximum working pressure.

Comply with regulations concerning safety, fire risks, electrical regulations in force in the country of final destination of the material. Use only products or solvent compatible with the parts in contact with the material (refer to data sheet of the material manufacturer).

PICTOGRAMS

					
NIP HAZARD	WARNING MOVING ELEVATOR	WARNING MOVING PARTS	WARNING MOVING SHOVEL	DO NOT EXCEED THIS PRESSURE	HIGH PRESSURE HAZARD
					
RELIEF OR DRAIN VALVE	WARNING HOSE UNDER PRESSURE	WEAR GLASSES OBLIGATORY	WEAR OF GLOVES IS OBLIGATORY	PRODUCT VAPOR HAZARDS	WARNING HOT PARTS OR AREAS
					
ELECTRICAL HAZARD	WARNING FIRE HAZARDS	EXPLOSION HAZARDS	GROUNDING	WARNING (USER)	WARNING SERIOUS INJURIES

PRESSURE HAZARDS

Current legislation requires that an **air relief** valve be fitted in the air supply circuit to the air motor to prevent over pressurisation. This safety feature ensures that it is not possible to supply the air motor with excessive air pressure that may cause injury.

Please ensure that a **material drain valve** is fitted in the fluid circuit to drain and depressurise the circuit. Once depressurised and drained, work /servicing may then commence on the equipment. Please remember to close these valves when restarting the system.

HIGH PRESSURE INJECTION HAZARDS

When working with high pressure equipment, special care is required. Fluid leaks can occur. There is a risk of material being injected to any exposed parts of body, this could cause severe injury :

- medical care must be sought immediately if paint is injected under the skin or in other parts of the body (eyes, fingers).
- never point the spray gun at any one. Never try to stop the spray with your hands or fingers nor with rags or similars.
- **follow the shut down procedure and always depressurize air and fluid circuits** before carrying out any servicing on the gun (cleaning, checking, maintenance of the material or cleaning of the gun nozzles).
- for the guns equipped with a safety device, always lock the trigger when not in use.

FIRE - EXPLOSION - SPARKS - STATIC ELECTRICITY HAZARDS

A poor earth connection, inadequate ventilation, sparks or static electricity can cause an explosion or fire. to avoid these risks when using or servicing SAMES KREMLIN equipment, the following safety procedures must be followed :

- ensure a good earth connection and ground the parts to be handled i.e. solvents, materials, components and equipment,
- ensure adequate ventilation,
- keep working area clean and free from waste solvents, chemicals, or solid waste i.e. rags, paper and empty chemicals drums,
- never use electrical switches / power if in an atmosphere of volatile solvent vapour,
- stop working immediately in case of electrical arcs,
- never store chemicals and solvents in the working area.
- use paint whose flash point is the highest possible to prevent from any formation of gas and inflammable vapours (refer to materials' safety instructions),
- install a cover on the drums to reduce the diffusion of gas and vapours in the spraybooth.

TOXIC PRODUCT HAZARDS

Toxic products or vapours can cause severe injury not only through contact with the body, but also if the products are ingested or inhaled. It is imperative :

- to know the material products and their risks,
- notified or hazardous materials must be stored in accordance with the regulations,
- the material must be stored in an appropriate container, never place materials in a container where there is a risk of spillage or leakage,
- a procedure must be applied for the safe disposal of waste material. It must comply with all prevailing regulations and legislations of the country where the equipment is to be used,
- protective clothing should always be worn in compliance with the material manufacturers' recommendations,
- depending on the application and chemical safety instructions, safety glasses, hearing protective earplug, gloves, foot wear, protective masks and possible breathing equipment should be worn to comply with the regulations (Refer to chapter "Safety equipment of SAMES KREMLIN selection guide).

CAUTION!

It is forbidden to use material containing high concentrations of halogenated hydrocarbon solvents with **aluminium** or **zinc fillers**. Non-compliance with the instructions may cause explosion risk causing serious or fatal injury.

EQUIPMENT REQUIREMENTS

Guards (motor cover, coupling shields, connectors,...) have been designed for a safe use of the equipment.

The manufacturer will not be held responsible for bodily injury or failure and / or property damage due to destruction, the overshadowing or the partial or total removal of the guards.

PUMP

Before carrying out any work, it is imperative to read and clearly understand the disassembly and reassembly instructions before servicing. The operator must understand the equipment and the safety instructions. These instructions are available in the equipment manuals.

The air motor is designed to be mounted with a pump. Never modify any components or couplings. When operating, please keep hands away from moving parts. Before starting up the equipment, please read the PRESSURE RELIEF instructions. Please ensure that any relief or drain valves fitted are in good working order.

HOSES

- Keep hoses out of circulation areas, moving parts or hot surfaces,
- Never expose product hoses to temperature higher than + 60°C / 140° F or lower than 0°C / 32° F,
- Never pull or use the hoses to move the equipment,
- Tighten all fittings as well as the hoses before operating the equipment,
- Check the hoses regularly; change them if they are damaged,
- Never exceed the maximum working pressure (MWP) indicated on the hose.

USED PRODUCTS

Considering the wide variety of products that are available and can be used in our equipment it is impossible to check and make recommendations for all chemical data, regarding the risks of possible chemical attack and their long term chemical reaction

SAMES KREMLIN can not be held liable for :

- compatibility of wetted parts,
- risks to staff and the surroundings,
- for worn or defective parts, for faulty equipment or units, or the quality of final product.

It is the responsibility of the user to know and prevent any possible risks such as toxic vapours, fires or explosions. He shall determine the risks of immediate reactions or pursuant to repeated exposures of the staff,

SAMES KREMLIN shall not be liable for physical injuries, direct or indirect material damages caused by the use of chemicals.

2. HANDLING

Check the weight and the dimensions of the equipment
(☞ refer to 'Technical features' section of the instruction manual)

If weight and dimensions are too important, the unloading must be carried out by means of a forklift or any other appropriate means with a qualified personnel and in a clear horizontal area to prevent from risks of damage injury or an accident.

The centre of gravity is not in the centre of the machine : carry out by hand a stability-test after having lifted the whole at 10 cm / 3.937" maximum.

After the unloading, the handling of the whole (eg: elevator pump) is carried out by means of a pallet truck taking the bottom part of the frame.

Remark : Each pump motor is fitted with a ring. The ring is designed for the hoisting of one pump and can not be used for the handling of the complete assembly.

3. STORING

Storing before installation :

- Storing ambient temperature : 0 / +50 °C / 0 / +122°F
- Protect the whole against dust, water trickling, dampness and shocks.

Storing after installation :

- Operating temperature : +15 / +35 °C / +59 / +138.2° F
- Protect the whole against dust, water trickling, dampness and shocks.

4. INSTALLATION OF THE EQUIPMENT

The machine is installed on a stable horizontal floor (for eg a concrete flag).

The machine shall be made stable by the use of holding down bolts or by the use of other anchoring methods, strong enough to prevent unintended bodily movement of the equipment.

To avoid risks caused by static electricity, the equipment as well as its components must be grounded.

- **For the pumping equipments** (pumps, pneumatic rams, frame...), a section wire of 2.5 mm² is fixed on the material. Use this wire to connect the material to "the general ground". In case of severe environments (mechanical protection of the wire of earthing insufficient, vibrations, mobile material...) where function damages at the ground are probable, the user have to replace the provided wire of 2.5 mm² by a device more adapted to its environment (wire with a more important section, bonding strip, fixing by thimble with eyelet...).

The continuity of the ground must be controlled by a qualified electrician. If the continuity of the ground is not ensured, check the terminal, the wire and the earthing point. **Never** use the material without have solved this problem.

- In the severe cases of environments (mechanical protection of the wire of earthing insufficient, vibrations, mobile material...) where damages of the function put at the ground are probable, the user will have to replace the wire of 2.5 mm² provided, by a device more adapted to its environment (wire of more important section, bonding strip, fixing by thimble with eyelet...),
- **The gun** must be 'grounded' via a material hose or an air hose. In case of spraying by means of a gun with cup, the air hose must be conductive,
- **The materials to be painted** must also be grounded.

All the materials situated in the working area shall be grounded.

- **Never store** more than necessary inflammable materials inside the working area,
- The materials must be stored into **approved drums** and grounded,
- Use only grounded **metals containers** for the use of cleaning solvents,
- **Cardboard and paper are prohibited.**

5. MARKING OF THE EQUIPMENT

Each equipment has a label plate with the name of the manufacturer, the equipment part number, the interesting informations to use correctly the equipment (pressure, voltage,...) and sometimes the above pictogram.

The equipment is designed with and consists of high quality materials and components which can be re-used.

The 2012/19/UE European Directive covers all equipments with a crossed-out bin pictogram. Please inform yourself about the collection systems for electric and electronic equipments.

Please act in accordance with local rules and **do not dispose of old equipment with household wastes**. A correct disposal of old equipment will help prevent negative consequences for the environment and health.

PUMP

35-C50

Disassembly / Reassembly

TRANSLATION FROM THE ORIGINAL MANUAL

IMPORTANT : Before assembly and start-up, please read and clearly understand all the documents relating to this equipment (professional use only).

THE PICTURES AND DRAWINGS ARE NON CONTRACTUAL. WE RESERVE THE RIGHT TO MAKE CHANGES WITHOUT PRIOR NOTICE.

SAMES KREMLIN SAS

13, chemin de Malacher
38 240 - MEYLAN - France
☎ : 33 (0)4 76 41 60 60

www.sames-kremlin.com

CAUTION :

Before any action on the pump, the T lubricant should be removed, shut off the compressed air supply and depressurize the system.

The pump is manufactured under the ATEX agreement and can not be modified. SAMES KREMLIN will not be held responsible for any failure to comply with that instruction.

▪ **GREASES AND GLUES**

Index	Instruction	Description	Part number
A 1	PTFE grease	'TECHNILUB' grease (10 ml / 0.0026 US gal)	560.440.101
A 2	Anti-seize grease	Grease box (450 g / 0.99 lb)	560.420.005
C 1	Medium strength Aneorobic Pipe sealant	Loctite 5772 (50 ml / 0.013 US gal)	554.180.015
C 2	Low strength - Aneorobic Adhesive	Loctite 222 (50 ml / 0.013 US gal)	554.180.010

▪ **FLUID MOTOR OR AIR MOTOR REPLACEMENT (REFER TO DOC. 573.474.050 & DOC. 573.516.050)**

Guards (air motor cover, coupling shields, housings ...) have been designed for safe use of the equipment.
The manufacturer will not be held responsible for bodily injury or failure and / or damage to property due to removal or partial removal of the guards.

PUMP DRAINING

Guards (air motor cover, coupling shields, housings ...) have been designed for safe use of the equipment.

The manufacturer will not be held responsible for bodily injury or failure and / or damage to property due to removal or partial removal of the guards.

- Adjust the pump air inlet pressure to get 1 bar / 14.5 psi.
- Adjust the gun air inlet pressure to get 0 bar / 0 psi (Airmix® model).
- Remove the suction rod from the product container.
- Remove the aircap and the nozzle from the gun.
- Drain the residual product from the product container by triggering the gun.
- Clean the suction rod with a cloth and some solvent.
- Insert the suction rod in a solvent container.
- Trigger the gun towards an empty container until the solvent becomes clean.
- Adjust the pump air inlet pressure to get 1 bar / 14.5 psi.
- Stop the main air inlet.
- Trigger the gun one more time to empty the residual solvent from the gun.

PUMP SEPARATION / COUPLING PROCEDURE

Guards (air motor cover, coupling shields, housings ...) have been designed for safe use of the equipment.

The manufacturer will not be held responsible for bodily injury or failure and / or damage to property due to removal or partial removal of the guards.

To work on the pump, it requires to :

- Disassemble all the accessories of the pump (air inlet supply, rods, filter), if necessary.
- Put aside the pump, if necessary (the pump is fitted with an hoisting ring).

Separate the pump

- Stop the pump.
- Disconnect the pump air inlet.
- Remove the screw (12) from the pump bracket (11) and remove the washer (13).
- Remove the screws (5) from the coupling housing (4).
- Remove the coupling housings (4).
- Remove the pin (9) and the axis (8).
- Loosen the 4 screws (17) from the outlet flange.
- Slightly rotate the outlet flange counter clockwise.
- Separate the fluid section.

Coupling the pump

- Install the fluid section (2) at the 4 screws (17) level.
- Slightly rotate the outlet flange clockwise.
- Tighten the 4 screws (17).
- Apply grease (grease, model A1) on the axis (8) and install it in its housing.
- Install the pin (9) in the axis (8).
- Clip the coupling housings (4).
- Tighten the screws (5) of the coupling housing.
- Tighten the screw (12) of the pump bracket.

DISASSEMBLY / REASSEMBLY OF THE FLUID SECTION

Guards (air motor cover, coupling shields, housings ...) have been designed for safe use of the equipment.

The manufacturer will not be held responsible for bodily injury or failure and / or damage to property due to removal or partial removal of the guards.

Disassembly

- Place the fluid section in a vice.
- Unscrew the pump foot (14a / 14b) with two wrenches.
- Remove the stop ring (12) and the ball (13).
- Remove the cylinder (9) with a wrench.
- Remove the 2 seals (10).
- Remove the piston (16).
- Unscrew the exhaust valve (20) with a wrench and an hexagon key.
- Remove the carbide seat (19) and the ball (17).
- Remove piston seal (18).
- Remove the outlet from the vice.
- Remove the stop ring (7).
- Remove the MB-A / GT cartridge (2a / 2b).

Assembly

Apply a light coating of grease to the seals.

If the piston is damaged, the replacement of it involves the systematic replacement of the cartridge.

- Place the fluid section in a vice.
- Grease (model A1) the MB-A / GT cartridge (2a / 2b).
- Install the MB-A / GT cartridge (2a / 2b) on the flange (6) with tool for cartridge assembly (4a / 4b) and install the stop ring (7).
- Grease the piston seal (18) and install it on the valve (20).
- Apply glue (model C1) on the seat (19).
- Install the valve assembly (20) on the piston (16) with a wrench and an hexagon key.
- Apply grease (model A1) on the tool for packing assembly (5) and the piston and install the assembly into the flange (6).
- Grease the seals (10) and install them on the cylinder (9).
- Grease (model A2) the thread of the cylinder (9) and tighten it on the flange (6).
- Install the ball (13) and the stop ring (12) into the pump foot (14a / 14b).
- Screw the pump foot (11a / 11b).

MOTOR

Guards (air motor cover, coupling shields, housings ...) have been designed for safe use of the equipment.

The manufacturer will not be held responsible for bodily injury or failure and / or damage to property due to removal or partial removal of the guards

The maintenance consists in changing the wetted or worn parts and to clean the parts with compatible materials without using abrasive materials that can damage them. The O-Rings are installed with PTFE grease. Make sure the seals are not damaged, one injured seal can lead to a motor malfunction.

Disassembly

- Unscrew the 3 screws (6) from the cover (5) with an hexagon key.
- Remove the cover (5).
- Remove the muffler (4).
- Unscrew the 2 screws (3) from the exhaust grid (10) with an hexagon key.
- Remove the exhaust grid (10).
- Unscrew the 3 screws (3) from the cover (2) with an hexagon key.
- Remove the cover (2).
- Remove the muffler (23).
- Unscrew the 4 nuts (9).
- Remove the reversing body (11).
- Remove the seal (14a / 14b).
- Remove the 3 connecting tubes (27).
- Remove the seals (24) from the connecting tubes (27).
- Remove the cylinder (15a / 15b).
- Remove the seal holder (13).
- Remove the piston assembly (17a / 17b) from the control rod assembly (19).
- Unscrew the coupling screw (22).
- Remove the O-Ring seal (21).
- Remove the piston (17a / 17b) from the control rod assembly (19).
- Remove the seal (18a / 18b).
- Remove the seal (14a / 14b).
- Remove the seal (26a / 26b) with a flat screwdriver.

Assembly

Apply a light coating of grease on the seals.

Installation direction of the seal (26a / 26b) : lip up.

- Pinch and install the seal (26a / 26b) on the motor flange (28a / 28b).
- Install the seal (14a / 14b) on the motor flange (28a / 28b).
- Install the seal (18a / 18b) on the piston (17a / 17b).
- Install the seal (21) on the coupling screw (22).
- Apply a light coating of grease (model A1) on the spring (20).
- Install a spring (20) in the piston (17a / 17b).
- Install the control rod assembly (19) in the piston (17a / 17b).
- Install the second spring (20) in the piston (17a / 17b).
- Ensure that the control rod assembly (19) is outside the piston (17a / 17b).
- Screw the coupling screw (22) on the piston (17a / 17b).
- Install the piston (17a / 17b) control rod assembly (19) on the motor flange (28a / 28b).
- Apply a light coating of grease (model A1) on the seal holder (13).
- Install the seal holder (13) on the control rod assembly (19).
- Apply a light coating of grease on the cylinder (15a / 15b).
- Install the cylinder (15a / 15b) on the piston (17a / 17b) - control rod assembly (19).
- Install the seals (24) on the coupling tubes (27).
- Install the coupling tubes (27) on the motor flange (28a / 28b).
- Install the seal (14a / 14b) on the reversing body (11).
- Screw the reversing body (11) by means of the nuts (9) on the tie-rod (16).
- Apply a light coating of glue (model C2) on the valve (8).
- Screw the valve (8) on the control rod assembly (19) with two wrenches.

- Install the seal (7) on the cover (2).
- Install the cover (2) on the reversing body (11) and screw the three screws (3) with an hexagon key.
- Install the muffler (23) correctly oriented according to the notch.
- Fix the exhaust grid (10) with the 2 screws (3) on the reversing body (11).
- Install the muffler (4).
- Install the cover (5) and screw the 3 screws (6) with an hexagon key.

■ DEGREES OF WEAR

The wetted parts in contact with the material are subject to wear with time. It depends, of course, on the rates and duration of pump operating; also on the material handled.

NOTA : Si le piston est endommagé, le remplacement de ce dernier implique le remplacement systématique de la cartouche.

NOTA : If the piston is damaged, you must change at the same time the cartridge.

ANMERKUNG: Wenn der Kolben beschädigt ist, müssen Sie gleichzeitig den Kolben und die Packung ersetzen.

NOTA : Si el pistón tiene un desgaste, su cambio llega al cambio del cartucho.

Guards (air motor cover, coupling shields, housings ...) have been designed for safe use of the equipment.

The manufacturer will not be held responsible for bodily injury or failure and / or damage to property due to removal or partial removal of the guards

CAUTION :

Before any intervention on the equipment, shut off the air supply and follow the general safety instructions. Open the drain or the gun to depressurize the gun. The ram must be in the low position.

CAUSE	SOLUTION
The pump does not start	Check the pump air supply. Refer to spray gun manual.
Priming trouble : → Air is always coming out from the spray gun → When priming, air (or material) does not come out from the spray gun	Be sure that the spray gun is fully opened and air evacuated through this one. Check the cleanliness of the strainer. Air intake at the fittings or at the suction rod. Check the upper spring. Change the valve under the cover. Check the pump valves. If a valve is stucked by dry paint, it can be unsticked without disassembling it. Blow air pressure directly by suction fitting.
The pump does not stop at once when shutting off the spray gun : → The pump stops only on down stroke → The pump stops only on up stroke	Check exhaust valve or piston seal. Check / change the upper spring. Change the valve under the cover. Check suction valve or upper cartridge. Blow air pressure in the suction valve. Check the valve and the lower spring.
The pump locks with an air leakage to the motor	Check the motor valve under the cover, the seal O-ring and the seal holder
On cup lub pump, the product overflow from the tank and leaves by the leakage outlet	Check the upper packing (GT cartridge, MB-A cartridge), change cartridge if it is necessary. Check / change the upper cartridge and the piston rod.
Spraying trouble	Refer to spray gun manual.

OPERATING PRINCIPLE AND START-UP

TRANSLATION FROM THE ORIGINAL MANUAL

IMPORTANT : Before assembly and start-up, please read and clearly understand all the documents relating to the equipment (professional use only).

THE PICTURES AND DRAWINGS ARE NOT CONTRACTUAL. WE RESERVE THE RIGHT TO MAKE CHANGES WITHOUT PRIOR NOTICE.

SAMES KREMLIN SAS
13, chemin de Malacher
38 240 - MEYLAN - France
☎ : 33 (0)4 76 41 60 60

www.sames-kremlin.com

1. OPERATING PRINCIPLE

The pump consists of :

- an alternating air motor (B),
- an hydraulic section (C) mechanically coupled to the air motor (B).

The air motor is supplied with compressed air by means of the regulator (D). The pressure is read on the gauge (E).

During its alternating movement, the air motor drives the piston of the hydraulic section (C), the fluid is drawn in (L) and forced under pressure in (N).

Due to its design, this pressure is always the one read on the gauge

Example : for a pump ratio 07/1 : $7 \times 6 \text{ bar} = 42 \text{ bar}$ / $7 \times 87 \text{ psi} = 609 \text{ psi}$

The spraying air pressure of the gun is adjusted by means of the regulator (knob) (F) and the pressure can be read on the gauge (G) (Only Airmix® model : see figure1).

- To adjust the fluid flow rate, turn the regulator (D).
- To adjust the spraying air, turn the regulator (F) (read on the gauge (G) (Only Airmix® model : see figure 1).

2. START UP

Protective clothing (gloves, protective masks, glasses, hearing protective earplug, protective clothing) should be worn to comply with the recommendations.

The working area must be correctly ventilated.

2-1 FILLING

Captions :

A	pump (B + C)	K	Protection carter
B	Motor	L	Suction rod
C	Fluid section	M	Air static (static conductor)
D	'MOTOR AIR' regulator	N	HP fluid section
E	Gauge	O	AIRMIX® or AIRLESS gun
F	'GUN AIR' regulator	P	T lubricant (125 ml / 4.4 oz)
G	Gauge		
H	Air inlet valve		
I	Ground		

(For specific installation, please contact your SAMES KREMLIN representative).

Guards (air motor cover, coupling shields, housings ...) have been designed for safe use of the equipment.

The manufacturer will not be held responsible for bodily injury or failure and / or damage to property due to removal or partial removal of the guards

Start up procedure :

- Ground the pump.
- **If the pump is a cup lub one, fill the wetting cup (S) with T lubricant (P) or with an appropriate cleaning solvent.**
- Unscrew the air regulators (D and F),
- Interconnect the equipment with the air pressure network (clean and dry air - $P < 6 \text{ bar} / 87 \text{ psi}$)
Install a water drop, if it is necessary.
- Connect all the hoses (M& N) as well as the gun (O).
- Remove the gun air cap by unscrewing the cap ring and nozzle (only in case of an Airmix® gun).

■ **FLUSHING WITH SOLVENT**

- Immerse suction rod (L) into solvent-filled container.
- Open motor air pressure supply - valve (H).
- Point the spray gun, not supplied with air, towards the material container and press the trigger.
- Increase **gradually** the air regulator (D) so that the pump runs slowly (Proportionally to pressure ratio). When material flows out regularly, release the trigger.
- Drain all solvent from the pump.

■ **PRIMING WITH MATERIAL**

- Immerse suction rod (L) into material container.
- Point the spray gun, not supplied with air, towards the material container and trigger the gun until the material flows out regularly.

■ **WORK**

- Reinstall the ring, the aircap and the nozzle (only in case of an Airmix® gun) on the gun.
- Adjust air regulator (D) to get the appropriate material pressure and flow rate.
- **Gradually** open air regulator (F) to adjust spraying air to obtain the required spray pattern.

2-2 PUMP SUPPLIED IN GRAVITY

➡ **CAUTION: The pumps can be supplied in gravity but not in filling.**

Interconnect the pump fluid inlet with the gravity cup supply hose and start up the pump as previously indicated.

3. SHUTDOWN AT THE END OF THE WORK

■ SHORT DURATION SHUTDOWN

- Decrease the material pressure of air regulator (D) until reading **0 bar / 0 psi** on gauge (E).
- Trigger the gun to depressurize the system.
- Unscrew the gun air regulator (F) or disconnect the gun air inlet.
- Remove the gun air cap and the nozzle (only in case of an Airmix® gun) from the spray gun and soak it into solvent.

■ LONG DURATION SHUTDOWN

- Decrease the material pressure of air regulator (D) so that the pump runs slowly.
- Unscrew the gun air regulator (F) or disconnect the gun air inlet.
- Remove the gun air cap and the nozzle (only in case of an Airmix® gun) from the spray gun and soak it into solvent.
- Remove the suction rod from the material container and immerse it in a solvent-filled container. Take all the appropriate precautions in the presence of flammable solvents.
- Point the gun towards the container and trigger the gun. When the solvent flows out, point the gun towards the recovery container.
- When the solvent flows out clean, release the gun trigger.

Nota : If the pump is a cup lub one, release the spray gun trigger when the pump piston is in a low position. To prevent from damaging the seals when starting once again the pump, the piston must be immersed into solvent.

- Fully unscrew the air regulator (D) and shut off the compressed air valve (valve H).
- Trigger the spray gun to decompress the hoses. Therefore, the pump and the hose remain filled with solvent at the atmospheric pressure.

4. SAFETY DEVICE

Guards (air motor cover, coupling shields, housings ...) have been designed for safe use of the equipment.
The manufacturer will not be held responsible for bodily injury or failure and / or damage to property due to removal or partial removal of the guards

AIRMIX® pump : A relief-valve (setting : 6.5 bar / 94 psi) is fitted on the pump air motor - thus protecting this one from an overpressure which could damage it.

1. DESCRIPTION

- Compact pneumatic pump
- Low maintenance and ease of use

Designed for :

- Supplying one or two guns, model AIRMIX® or AIRLESS depending upon the pump configuration
- For all kind of paints and varnishes

2. TECHNICAL FEATURES

■ PUMP 35C50

Motor model..... 970-4
Pump body model..... 50 cc
Pressure ratio..... 35/1
Weight (bare wall mounted pump)... 12 kg /
26.45 lbs

Wetted parts :

- Flange : Stainless steel
- Cylinder : Hard chrome stainless steel
- Piston : Hard chrome stainless steel
- Seat : Stainless steel / Carbide
- Pump foot : Stainless steel / Carbide

Pump sealing :

Upper : Stainless steel / UHMW Polyethylene
cartridge
Lower : UHMW Polyethylene seal

Motor stroke	100 mm	4"
Air motor piston section	97 cm ²	15.03 sq.in
Fluid section	5,3 cm ²	0.82 sq. In
Fluid delivery per cycle	50 cm ³	1.69 oz
Number of cycle for 1 liter of product	20	20
Fluid delivery (30 cycles)	1,5 l	0.4 US gal
Maximum air inlet pressure	6 bar	87 psi
Maximum fluid discharge pressure	210 bar	3045 psi
Weighted sound pressure (LAeq)	70.4 dBa	70.4 dBa
Maximum operating temperature	60°C	140 °F

Air consumption :

- 7 bar / 101,52 psi : 26,5 Nm³/h (30 cycles).

Nota : Data given for your information only.

Test conditions :

- Test duration : 30 s,
- Motor air pressure: 6 bar / 87 psi,
- Material used : water,
- Gun : Xcite™,
- Tip : 09.

■ **FITTINGS**

- **Fittings - Fluid section, model C50 M 26 x 125**

		Bare pump	Pump assembly
Air	Inlet	F 3/8" BSP	F 3/8" BSP (valve)
	Outlet	-	M 1/4" NPS (spraying air)
Fluid	Inlet	M 26 x 125	Suction rod
	Outlet	F 3/8" NPS	M 1/2" JIC

- **Fittings - Fluid section, model C50 F 1/2 G**

3. INSTALLATION

The pumps are designed to be installed in an adapted booth.

■ DESCRIPTION OF THE LABEL MARKING

Marking according to the ATEX regulation
(Ex : version 35C50)

Sigle SAMES KREMLIN	Manufacturer brand
Made in France	Country of manufacture
CE II 2 G	CE : European conformity : For use in explosive area II : group II 2 : class 2 G : gas Surface equipment meant to an area where explosive atmospheres due to gas, vapours, mists are liable to appear from time to time in usual operating.
Ex h IIB TX	Ex : Marking of conformity with European standards h : Mode of protection for non electrical device IIB : Gas group TX : Temperature class - Maximum surface temperature : See table below*
Gb	Gb : Equipment protection level (Gas zone1)
Type de pompe / Pump type	Pump version
Rapport de pression / Pressure ratio	Pump pressure ratio
Débit par cycle / Fluid flow per cycle	Fluid section capacity
Pression air max. / Max. air pressure	Maximum pump motor air supply maximum
Pression prod max. / Max. fluid pressure	Maximum fluid pressure at the outlet of the pump
Numéro de série / Serial number	Number given by SAMES KREMLIN. The four first numbers indicate the manufacturing year.

* Temperature class

Cartridge	Temperature class	Maximum surface temperature
GT	T3	200°C / 392 °F
MB-A	T3	200°C / 392 °F
