Editor's note

To help you increase your competitiveness, **SAMES KREMLIN** dedicates itself daily to excellence in terms of innovation and reliability.

We are constantly improving our performances as well as quality to meet your specific needs.

We also help you define the equipment allowing your installation to comply with V.O.C. directives and industry standards.

We enable you to benefit from reliable technologies while ensuring you a swift return on investment.

In this catalog, you will find the equipment that will enable you to reach the paint application results you are targeting and the finish quality you desire.

Our mission is to provide you with the best equipment to meet your needs and requirements.

The entire team at **SAMES KREMLIN** is at your disposal to answer your questions.

Enjoy your reading.

CUSTOMER SATISFACTION

SAMES KREMLIN HAS WORKED OUT A COMPLETE OFFER OF SERVICES, ADAPTED TO ALL YOUR NEEDS:

Advice, repair, servicing, adjustment or intervention by a qualified technician. Whatever your request may be, **SAMES KREMLIN** Customer satisfaction department, is at your disposal to answer your needs within the shortest time.

> HOTLINE

SAMES KREMLIN has a quality hotline which takes care of our customer satisfaction. please fill free to contact us. our customer service team would like to provide an answer under 48 hours.

+33 (0)1 49 40 25 28

MONDAY TO FRIDAY: 8:30 - 12:00 AM & 13:00 - 17:30 PM

> AUDIT

In order to make the most from your installation, paint or powder, advice and expertise of specialists are essential. Made of practical, experienced members, **SAMES KREMLIN** customer support team will carry out a diagnostic of your installation and will provide you with a worthy technical assistance for the improvement or retrofit of your paint line.

> REPAIR

A regular, and carried out professionally, maintenance or a retrofit of your equipment, is the best way to guaranty the correct running of your equipment. To this end, do not hesitate to contact one of our technicians:

- to get technical advice or technical assistance by phone
- to get one of your product repaired or controlled
- to carry out a retrofit

> SPARE PARTS

Original spare parts guaranty the correct running of your equipment. We are here to deal with all your orders of spare parts throughout the world. Thus, our aim is to rapidly supply you and at the best price, with the wished part in order to guaranty an optimum and prolonged running of your paint or powder application equipment.

> TRAINING

SAMES KREMLIN is registered as a training centre by the French Ministry of Employment. Training sessions that allow you learning the requisite knowledge to the use and the maintenance of your equipment are organised throughout the year. A catalogue can be obtained upon request. You will be then able to choose among the proposed selection of training courses, the type of training that meets your needs or production aims. These training sessions can be organised within your premises or in our training centre located in our headquarters in Meylan - FRANCE.

QUALITY INSURANCE

In conformity with the ISO9001 standard - issue 2015, the requisite procedures and registrations are mastered. The seriousness with which **SAMES KREMLIN**'s quality policy is dealt ensures you an optimum quality at each stage of the production and of the assembly of the components.

Our products are in the scope of the following European directives:

- 2014/34/UE Explosive Atmospheres
- 2006/42/CE Machinery
- 2014/35/UE Low Voltage
- 2014/30/UE Electromagnetic Compatibility
- 2011/65/UE RoHS Restriction of Hazardous Substances in electrical and electronic equipment
- 2012/19/UE WEEE Waste of Electrical and Electronic Equipment
- 1907/2006/CE REACH Registration, Evaluation, Authorization and Restriction of Chemicals.

A process mapping allows organizing all the stages while being very attentive to the various environments (customers, competition...), to the audits (inner and outer) and to the indicators linked to the defined aims.

AIRSPRAY TECHNOLOGY

In 1924, **KREMLIN** introduces the first Airspray gun in Europe to the finishing industry. The popularity of this gun spread so quickly that all types of spray guns become known as "Kremlins".

➤ The place of the Airspray technology inside coatings technologies:

Recommended range of use

AIRSPRAY TECHNOLOGY

Airspray is commonly known as the low pressure spraying technology and operates up to 24 bar. It guarantees a high finishing quality with limited flow rate (generally under 600 cc/min).

For higher atomizing paint pressures, painters can go to the Airmix® technology with medium pressure giving a high finishing quality for high productivity requirements or the Airless technology with very high flow for very intensive production which does not request such high a quality of finishing.

The equipment

THE AIRSPRAY range is designed for manual, automatic or robotic application. In addition to airspray, we have developed a complete range of electrostatic guns (please refer to the relevant catalogue)

The Airspray technology is largely known for its gravity feed spray gun. This is the simplest way to apply paint when small paint volumes are required (less than 5 l a day).

For larger paint volumes, a pressure feed Airspray gun is used, associated with air & fluid hoses and a feeding system (pump or pressure pot). Depending on the pump pressure ratio, a paint pressure regulator may be needed.

AIRSPRAY TECHNOLOGY

3 Technologies in Airspray

AIRSPRAY is divided into 3 technologies, each having their own benefits.

- **CONVENTIONAL** (previously HPA) :

This is traditional Airspray technology, able to spray viscous material (>40 s CA4) and offering the highest finishing quality.

- **HVLP** – High Volume Low Pressure (previously HTI - HVLP) :

Following a Californian rule from 1972, it was stated that the maximum air pressure at the aircap should be 0.7 bar/10 psi giving lower paint motion and a minimum of 65 % transfer efficiency.

- **LVLP** – Low Volume Low Pressure (previously HTI) :

It is a hybrid technology between the HVLP and Conventional. It combines high spraying quality while insuring high transfer efficiency. It is recommended for medium viscosity (between 20 to 40 s CA4).

Criteria	HVLP	LVLP	Conventional
Viscosity < 20 s	****	***	*
Viscosity 20 s – 40 s	**	****	***
Viscosity > 40s		*	****
Spray Quality	Medium	Good	High
Air Consumption	High	Medium	Low
Transfer Efficiency	High	Good	Low
Speed of application	Low	Good	High
Type of material	Mat paint		Glossy paint

AIRSPRAY TECHNOLOGY

> Sames Kremlin's innovations

Vortex

The Vortex produces a swirling effect to the paint which allows the paint to leave the nozzle under an helical pattern shape which improves the homogeneity of the film build.

- No blotchy effect
- Better Transfer efficiency on complex parts.
- Reduced paint booth maintenance

Restrictor

The restrictor calibrates the flowrate and create a controlled pressure loss in the gun upstream.

- Finer spray quality
- Reduced nozzle and needle wear
- Steady flowrate for optimal atomization

Flowmax® Patented

Flowmax® technology guarantees total sealing for leak-free pumps.

- Maintenance free pumps
- Fast ROI
- High durability

Magnetic assistance

The magnetic assistance is a gun innovation to reduce the trigger stress. A magnet at the end of the stroke attracts the needle when the trigger is pulled to reduce the trigger pull up to 20%.

- Lighter trigger pull
- No repetitive strain injuries

AIRSPRAY TECHNOLOGY

➤ How to select a nozzle ?

The selection of the nozzle is essential to correctly set up an Airspray gun. The below table gives the paint speed (in m/s) at the nozzle according to the flowrate (left column) and the nozzle used (top row).

The optimal paint speed corresponds to the green area. Out of this area, the speed is too high, leading to more overspray and lower transfer efficiency.

In some cases, the Restrictor technology is recommended (right column).

Speed in m/s	Nozzle size in mm											Restrictor advise
Flowrate in cc/min	0,5	0,7	0,9	1	1,1	1,2	1,3	1,4	1,5	1,6	1,8	
35	3	1,5	1	0,7	0,6	0,5	0,4	0,4	0,3	0,3	0,2	-
59	5	2,6	1,7	1,3	1	0,9	0,7	0,6	0,6	0,5	0,4	-
74	6,3	3,2	2,2	1,6	1,3	1,1	0,9	0,8	0,7	0,6	0,5	-
89	7,6	3,9	2,6	1,9	1,6	1,3	1,1	1	0,8	0,7	0,6	0,8

optimum paint speed

good paint speed

bad paint speed

Paint

Decoration and protection are often two associated functions. To achieve these aims, and to re-finish products, we have at our disposal a tremendous number of surface treatments, (for example nickel or chrome plating, and so on).

Paint is also perfect for both of these functions. In addition, paint is universally used, and can be applied on any surface, such as wood, metal, stone, leather, plastic and elastomers. Paint does not come as a finished product, and hence the quality of application will depend on all its stages of preparation, which we will call the "Painting System".

In general, the stages are as follows:

- » Surface preparation
- » Application of the coating (paints, stains, varnishes, etc...)
- » Drying

FPro P WBE

EMBEDDED INNOVATIONS : VORTEX RESTRICTOR

The FPro P WBE has been made to spray very abrasive products, keeping the high spray performances of the original FPro versions. It is particularly recommended to enamels applicators, as it gives a premium finishing to the glossy paint, and it benefits from reinforced internal components (nozzle and needle) dedicated to the abrasiveness of the enamels

- **New Standard in Airspray for water-based enamels (porcelain)**
- **Performance at your fingertips**
- **Effortlessly Perfect Spraying**

SPECIFICATIONS

Sprayed materials	Varnishes, lacquers, stains, polyurethans, two-component
Body of the gun	Anodized Forged Aluminum
Maximum air inlet pressure (bar)	6
Recommended atomization air pressure at the handle (bar)	1.5-2.5 (HVLP/LVLP) - 2.5-3.5 (CONV)
Air consumption (m³/h)	16.1 - 23.5 (HVLP at 1.5-2.5 Bar) - 21.8-28.2 (CONV at 2.5-3.5 Bar)
Weight (g)	480
Maximum Fluid Temperature (°C)	50
Transfer efficiency in % (EN 13966-1)	78 (HVLP) - 72 (LVLP) - 66 (CONV)
Nozzle	Stainless steel
Needle	Treated Stainless steel
Wetted parts	Stainless steel
ATEX	II2G Ex h IIB T6 Gb X

FITTINGS

Air inlet	M 1/4" NPS (+ M 1/4" BSP)
Fluid inlet	M 3/8" NPS

All Spare FPro P WBE Projectors come with no Vortex nor Restrictor

FPro LOCK P

FPro LOCK P spray gun gives you the brand new FPro finishing technology and consistent production whatever the operator's skills. SAMES KREMLIN brings you the perfect solution for high level use in demanding environments. The lock version offer no more knob adjustment for production repeatability over shifts.

- **New Standard in Airspray**
- **The lightest spray gun for high productivity**
- **Constant high performance for all production lines**

PROFESSIONAL FINISHING FOR ALL PAINTERS!

General informations

FPro S

PROFESSIONAL FINISHING FOR ALL PAINTERS!

FOCUS VORTEX

The **SAMES KREMLIN** paint Vortex produces a swirling effect to the paint which allows the paint to leave the nozzle under an helical pattern shape which improves the homogeneity of the film build.

The FPro S guns are a combination of the successful features of the FPro P, such as the lightweight gun body, ergonomics valves and Vortex, and some brand new features. This suction feed gun is designed for hard to atomize coatings up to 45-55 seconds CA4.

- Breakthrough in Airspray technology
- Enhanced suction power
- Brand new suction cup options

SPECIFICATIONS

Sprayed materials	Virtually all coatings
Body of the gun	Anodised Forged Aluminum
Maximum air inlet pressure (bar)	6
Recommended atomization air pressure at the handle (bar)	2.5-3.5
Air consumption (m³/h)	26-27
Weight (with cup) (g)	832
Maximum Fluid Temperature (°C)	50
Transfer efficiency in % (EN 13966-1)	66
Nozzle	Stainless steel
Needle	Stainless steel
Wetted parts	Stainless steel/aluminum
Vortex	Pom C
ATEX	II2G Ex h IIB T6 X Gb

FITTINGS

Air inlet	M 1/4" NPS
Fluid inlet	M 3/8" NPS

MAIN SPARE PARTS

Description	Part number
Complete Aluminum suction cup	138.400.000
Pack of filters (200µm) (x4)	138.310.300
Adaptor for 3M disposable suction cups	921.260.401
Kit Suction booster valve	129.780.025
Seal kit	129.130.901
Repair set for FPro S	129.780.901
Pack of cover and cup seals for suction cup (x10)	138.310.320

FPro G

Perfectly balanced, the FPro G, gravity paint spray gun, provides a superior finish for all professional painters in the industrial markets.

- **New standard in Airspray for premium application needs**
- **Ergonomic design for improved working conditions**
- **Perfect for frequent color changes**

PROFESSIONAL FINISHING FOR ALL PAINTERS!

FPro GSP

The FPro GSP, combining gravity and pressure technologies, is the best choice to ally high finishing quality and comfort of use even for thick materials. This gun is available assemble or in kit form for all the frequencies of use.

- **High spraying quality even with viscous materials**
- **Modular gun for large range of applications**
- **Ergonomic and robust design**

S3 G

The S3 G is our most compact and light gun, designed for tight area applications and where touch-ups are required. It is also an ideal solution for small hands.

- **Small to medium viscosity material**
- **Specific aircap for line fan: very precise touch-up work**
- **Improved ergonomics: light & compact body and small cup (0.25L)**

SPECIFICATIONS

Sprayed materials	Shades, varnishes, lacquers, stains, polyurethans, 2 component
Body of the gun	Polished Forged Aluminum
Maximum air inlet pressure (bar)	6
Recommended atomization air pressure at the handle (bar)	1.5-2.5 (HTI) – 2.5 – 3.5 (HPA)
Air consumption (m³/h)	7.5 (HTI) – 8-10 (HPA)
Weight (with cup) (g)	515
Maximum Fluid Temperature (°C)	50
Nozzle	Stainless steel
Needle	Stainless steel
Wetted parts	Stainless steel

FITTINGS

Air inlet	M 1/4" NPS
Fluid inlet	-

S3 A

The S3 A is our most compact suction fed gun with outstanding ergonomics for small hands and tight areas where touch up or shading is required.

- Outstanding atomization quality
- Improved ergonomics, light & compact
- Special cup design: the gun holds by itself anywhere between two spray operations

SPECIFICATIONS

Sprayed materials	Shades, varnishes, lacquers, stains, polyurethans, 2 component
Body of the gun	Polished Forged Aluminum
Maximum air inlet pressure (bar)	6
Recommended atomization air pressure at the handle (bar)	2.5 - 3.5
Air consumption (m3/h)	8-11
Weight (with cup) (g)	595

SUCTION CUP - WITH NON-DRIP SYSTEM

1/4 turn quick opening SM6 aluminum twist cup (for M22 and M21 ranges)
1/4 turn quick opening PeHD cup (for S3A)

CUP PART NUMBERS FOR FPRO S AND M22A

Description	Material	Fitting	Capacity (L)	Part number
Complete suction cup for FPRO S	Aluminum	F 3/8" NPS	1	138.400.000
Complete SM6 standard suction cup	Aluminum	F 3/8" NPS	1	138.360.000
Fitted cover (with tube)	Aluminum	F 3/8" NPS	-	138.360.200
Cup only	Aluminum	-	1	138.350.100

CUP PART NUMBER FOR S3 A

Description	Fitting	Material	Capacity (L)	Part number
Suction cup (grey)	F 1/4" NPS	PeHD	0.25	138.390.000

SEAL PACKS FOR SM6

Description	Quantity	Part number
Pack of cup seals	10	138.010.900
Pack of filters (200 µm)	4	138.310.300
Pack of non-drip plugs	5	138.350.901
Pack of filters for SM5 (old model) (132 µm)	4	138.010.800

SEAL PACKS FOR S3 A CUP

Description	Quantity	Part number
Pack of 5 non-drip plugs for 0.25 L and 0.6 L cups	5	139.270.210
Pack of filters (200 µm)	4	138.310.300

Accessories for airspray guns

GRAVITY PRESSURE CUP

Guns	Description	Material	Capacity (L)	Fitting	Part number
M22 GSP	Grey gravity pressure pot	PeHD	0.6	M 1/4" BSP	139.270.260
M22 G / FPro G	GSP kit	PeHD	0.6	M 1/4" BSP	

CUP PAPER FILTER

Disposable filter paper, used to strain the paint before pouring it into the cups.

FILTER

Description	Quantity	Part number
Pack of paper filter (260 µm)	10	151.399.903

FUNNELS WITH REMOVABLE SPARE SCREEN FOR CUPS

FUNNELS

Description	Funnel size	Internal diameter (mm)	Screen size (µm)	Use	Part number
Funnel with 2 screens Ø = 50 mm - 210 and 510 µm	Small	105	210 and 510	For cups	057.080.000

SPARE SCREEN

Description	Internal diameter (mm)	Size (µ)	Use	Part number
Spare screen	50	210	For small funnel	057.070.200
	50	510	For small funnel	057.070.100

ACCESSORIES AND FILTERS FOR AIRSPRAY GUNS

FLUID INLET FILTER

Description	Fittings on gun	Hoses thread	Part number
Fluid Inlet filter with N°6 screen for M22/FPro spray guns (132 µm)	F 3/8" NPS	M 3/8" NPS	129.140.030

SEAL PACKS FOR FLUID INLET FILTER

Description	Quantity	Part number
Pack of n°6 screens (132 µm)	10	151.399.902
Pack of seals	10	129.489.902

VARIOUS ACCESSORIES

Description	Inlet	Outlet	Part number
Air inlet swivel fitting	M1/4" G	F 1/4" G	129.020.070
Air inlet quick-disconnect fitting	Ø5.5	F 1/4" NPS or M 1/4" NPS	905.030.105
Gun inlet pressure gauge for HVLV compliance testing	M 1/4" NPS	F 1/4" NPS	150.070.560
Table stand for gravity-fed spray gun	-	-	049.221.800
Wall support for gravity-fed spray gun	-	-	049.221.900

A35 LP (HTI)

Modular design for Low Volume Production with an outstanding finish quality. Available in two technologies : HVLP and LVLV

- High transfer efficiency (up to 72%)
- Good finish quality
- Modular design & high reliability

SPECIFICATIONS

Maximum air inlet pressure (bar)	6
Maximum fluid pressure (bar)	6
Trigger air pressure (bar mini)	3
Recommended atomization air pressure (bar)	2 - 2.5
Weight (g) (gun only)	497
Maximum Fluid Temperature (°C)	50
Transfer efficiency in % (EN 13966-1)	74 (E3 K HVLP) - 72 (EP3)
Air consumption (m³/h)	20 - 30
Wetted parts	Stainless steel - treated stainless steel
ATEX	II2G Ex h IIB T6 Gb X

BASE FOR A35 HTI GUNS

Type	Side outputs	Rear outputs
Fluid circulation	Circulation in the base (⊥)	Circulation in the base ()
Material (base plate)	Aluminum with stainless steel insert	Aluminum with stainless steel insert
Weight (g)	240	480

FITTINGS

Power supply	Gun base	Fittings supplied, non fitted
Fluid	F 1/4" NPS	Quick fittings - Ø 6 x 8 hose
Atomization air	F 1/4" NPS	M 1/4 NPS - air hose int Ø 8 mini
Pilot air	F 1/8" NPS	Quick fittings -air hose Ø 4x6

General informations

A 35 HPA

Modular design for high volume production with an excellent finish quality. Wide fan pattern available.

- Answers to high production **Airspray** rates
- Designed for high viscosity material
- Modular design & high reliability

SPECIFICATION

Maximum air inlet pressure (bar)	6
Maximum fluid pressure (bar)	6
Trigger air pressure (bar mini)	3
Recommended atomization air pressure (bar)	3 - 5
Weight (g) (gun only)	497
Maximum Fluid Temperature (°C)	50
Air consumption (m³/h)	33
Wetted parts	Stainless steel - treated stainless steel
ATEX	II2G Ex h IIB T6 Gb X

BASE FOR A35 HPA GUNS

Type	Side outputs	Rear outputs
Fluid circulation	Circulation in the base (⊥)	Circulation in the base (⊥)
Material (base plate)	Aluminum with stainless steel insert	Aluminum with stainless steel insert
Weight (g)	240	480

FITTINGS

Power supply	Gun base	Fittings supplied, non fitted
Fluid	F 1/4" NPS	Quick fitting - Ø 6 x 8 hose
Atomization air	F 1/4" NPS	M 1/4" NPS - air hose Ø 7mm int

General informations

A25F HPA Flowmax® gun

Flowmax® technology: unsurpassed reliability and multi-products use. The A25F Flowmax® gun is designed for an intensive use. The sealing of the gun is made with a bellow guaranteeing a high level of reliability. It is recommended for spraying paints, glues, water-based materials and UV products.

- **High transfer efficiency**
- **Outstanding finish quality**
- **Modular design & high reliability**

SPECIFICATIONS

Maximum air inlet pressure (bar)	6
Maximum fluid pressure (bar)	6

Airspray Tanks

To feed, under pressure, all Airspray automatic and manual pressure guns. Our Airspray Tanks are CE, ATEX and ASME certified. Our agitators are lube-free agitator. They are directly assembled on some tanks, but can also be easily added afterwards to any 10L, 20L or 50L tank.

- **Easy to work with:** Easy to use, easy maintenance
- **New Premium Agitator:** Lube-free and very high performances
- **Smart Lid:** User friendly and adaptable

General informations

Diaphragm pumps

PMP 150 pump

The PMP-150 diaphragm pump is designed for applications requiring a 1:1 pressure ratio and can be used on some adhesive applications and harsh or high viscosity coatings.

- **Simple design: easy operation and maintenance**
- **Compact diaphragm technology: constant and pulse-free delivery for superior finish**
- **Designed for water-based and solvent-based materials**

SPECIFICATIONS

Pressure ratio	1/1
Fluid volume per cycle (cm ³)	100
Number of cycles per litre of products	10
Air consumption (m ³ /h) at 30 cycles/mn at 4 bar	1.1
Fluid Output at 30 cycles/mn (l/mn)	3

01D140 / 01D140E

ULTIMATE HIGH PERFORMANCE AND COMPACT DESIGN DIAPHRAGM PUMP!

The 01D140 double diaphragm pump is designed for fluid transfer and small circulating systems with 1:1 ratio. This pump will deliver high performance and long-term reliability. For waterborne abrasive product applications such as porcelain and ceramic, the 01D140E is designed with specific EPDM diaphragms.

- Perfect for frequent color changes
- Reliable and durable
- Low cost of ownership

02C85 Airspray paint pump

The airspray 02C85 piston pump is designed for use with a single or multiple gun system spraying medium viscosity coatings. It can also be used on a heated circulation system.

- **Compact Design:** easy to integrate
- **Simplified Maintenance and servicing**
- **Reinforced reliability:** GT seals

PCS 03R440 FLOWMAX® paint pump

The 03R440 solves common issues of 24/7 paint pumps. This pump features a bellows technology and a state of the art lubricant circulating system.

They are available in wall-mounted versions fitted with GT seals (waterborne materials) or PU seals (solvent-based materials).

- **Extended lifetime**
- **Quick and simple maintenance**
- **Clean paint kitchen**

SPECIFICATIONS

Pressure ratio	3/1
Fluid volume per cycle. (cm³)	440

Mechanical & electronic dosing

PU 2125 F pump

The Flowmax® technology, a Sames Kremlin patented SuperLife™ bellow design, ensures a perfect mixing accuracy thanks to the total sealing without packings.

Fixed ratio : the economical and easy solution while benefitting from the HVLP, LVLP and CONV spraying.

PU 2125 F are tested and comes complete ready for use.

- **User friendly**
- **Material mixing quality**
- **Security of application**

www

FEATURES

BENEFITS

Sealing done by a FLOWMAX® bellow on the catalyst side

High reliability
No more lubricant cups
Leak free
Total sealing between pump and its environment, ideal to work with moisture-sensitive catalysts
Ideal for UV and pre-catalyzed materials

Comes with mixer, mix manifold, air feeding assembly, suction rod for base and flushing solvent, 6L catalyst gravity tank

Ready to use pump

Semi-automatic manifold with synoptic

Safe operation
User-friendly

Catalyst re-circulation

Quick color change and flushing without catalyst loss

Stainless steel fluid sections (base and catalyst) - in standard

Chemical compatibility w/o any risk of corrosion with water-based materials

Cart-mounted pump

Easy positioning in the working area (various working areas)

SPECIFICATIONS

Mixing ratio (upon version)	1/1 - 2/1 - 3/1 - 4/1 - 5/1
Pressure ratio	0.9 to 1.6/1
Max Fluid viscosity in CA 4 (s)	180 s
Maximum air inlet pressure (bar)	6
Balanced acoustic pressure (dBA)	80
Weight (kg)	50
Wetted parts	Stainless steel, polyethylene, treated steel Catalyst fluid section : 304 stainless steel Bellow : PTFE

READY TO USE INNOVATIVE AND SIMPLE MIXING AND DOSING SOLUTION

- User friendly
- Material mixing quality
- Security of application

FEATURES

BENEFITS

Plug & Spray	Quick start-up
Sames Kremlin patent: Free Pulse Electronic Control (FPE)	Constant fluid flowrate
Innovative control system of pump change-over	Unsurpassed +/- 1 % mixing accuracy and +/- 1 % repeatability
Direct injection in the high performance static mixer	Perfect mixing
Recording of fluid consumptions and VOC	Fluid and solvent consumptions stored in memory
Possibility to print records	
Automatic component management : base, catalyst and solvent	User friendly
Automatic flushing and material generation	User-friendly and easy programming for the operator
User-friendly control panel	
Preventive maintenance alarm	Safe operation
Continuous ratio checking and alarm	
Low level drum alarm	
Ratio check kit in standard with 2 liters test tube	Visual control of mixing accuracy
Filter and drain assembly in standard	No product loss
Sealing done by a FLOWMAX® bellow on the catalyst side	High reliability
	Total sealing between pump and its environment, ideal to work with moisture-sensitive catalysts
Wide range of ratio from 5 to 160%	Suitable for use on a wide range of markets
Suitable for HVLP / LVLP / CONV spraying technologies	
Very low flow rate from 10cc	

SPECIFICATIONS

Electrical Power	115/230V - 75W
Maximum air inlet pressure (bar)	6
Fluid viscosity (cps)	30 - 8000 cps
Mixing accuracy (%)	+/- 1 %
Mixed fluid output (cc/min)	Up to 2000
Mixing ratio	1/1 - 20/1 (100% - 5%)
Wetted parts	Stainless Steel and PEHD

FITTINGS

Air Inlet	F 3/4" BSP
Fluid Outlet	F 3/4" JIC

AVAILABLE CONFIGURATIONS

Description	Pressure ratio	Air motor type	Maximum fluid pressure (bar)	Number of base	number of catalyst	Part number
PU 3000 2L - Airspray versions	1/1	1500	0/6 or 0/40	1	1	155.680.140

02-C85 flushing pump - PU 3000	● (Ø 16)	-	-	-	155.680.170

CYCLOMIX™ Micro and Micro+ PH

Cyclomix Micro allows the user to dose, mix and continuously deliver two-component paints and adhesives. The programming is user-friendly and quick, with data in-putting magnetic signal. Flushing and maintenance are very simple.

- Fresh material on demand
- Elimination of manual mixing errors
- Significant material saving

FEATURES	BENEFITS
Automatic component management : base, catalyst and solvent	Dosing +/- 1 % and repeatability +/- 0.5 %
Automatic flushing and material generation	Quick start-up. Minimal material and solvent wastage.
Adjustable flushing volume Several flushing sequence available : only Base side; Base side then Catalyst ; Catalyst side then Base side	Solvent savings and environmental protection
Continuous ratio checking and alarm	The paint applied on parts always conforms to specifications
User-friendly control panel	User-friendly and easy programming for the operator
Stainless steel design	To handle a wide range of materials
Recording of fluid consumptions and VOC with the possibility to print records (with RS 232 option)	Fluid and solvent consumptions stored in memory
Possibility to monitor the Cyclomix™ Micro from the spray booth (with the glass kit option)	Ergonomy of the working station
Design of the mixing plate	Easy maintenance and spare parts standardization
PH version (stainless steel 316L)	Compatible with acid catalyst

SPECIFICATIONS

Electrical Power	115 / 230V - 75W
Trigger air pressure (bar mini)	4
Product pressure (bar)	2 - 175
Weight (kg)	25
Wetted parts	Stainless steel and PEHD 316L stainless steel on PH version catalyst side
Mixing ratio	0,6/1 to 20/1 (160% to 5%)
Mixing accuracy (%)	1%
Maximum number of gun to be fitted	1
Mixed fluid output (cc/min)	100 - 2000
Fluid viscosity (cps)	30 - 5000
height (cm)	17.3 (command cabinet) - 40 (dosing unit)
Width (cm)	36.6 (command cabinet) - 40.7 (dosing unit)
Depth (cm)	11.1 (command cabinet) - 30 (dosing unit)

CYCLOMIX™ Multi and Multi PH

Cyclomix multi allows the user to dose, mix and continuously deliver two-component paints and adhesives. Cyclomix Multi can handle up to seven different bases and three catalysts.

- Elimination of manual mixing errors
- Material savings guaranteed
- Always fresh material on demand

Supplied without pumps or guns to be ordered separately
Designed to supply one gun only

General informations

FEATURES	BENEFITS
Automatic component management: base, catalyst and solvent	Dosing +/- 1% and repeatability +/- 0.5%
Automatic mix material fill	Quick start-up. Minimal material and solvent wastage.
Adaptable programming for each color	Ideal application for each color
Several flushing modes: production cycle, extended production stops, solvent-based materials	Perfect compatibility with production conditions evolutions
Fast mixing ratio accuracy	Visual control of mixing accuracy
batch mode	To easily get small quantities of mixed materials for touch-up works
Autowash system	Off-production gun automatic monitoring
Multilingual display and integrated instruction manual	User-friendly and easy programming for the operator
Stainless steel design	Compatible with water-based materials
Numerical interface	Quick link with an on-line automate
Integrated spraying air management	Comfort and safety during color and solvent fill
Pneumatic emergency flushing	Perfect flushing in case of power supply cut-off
Design of the mixing plate	Easy maintenance and spare parts standardization
Robotic interface	Connection with an on-line automate
PH version	Compatible with acid catalyst

SPECIFICATION

Electrical Power	115 / 230 V - 75 W
Trigger air pressure (bar mini)	4
Product pressure (bar)	2 - 200 bar
Weight (kg)	70
Wetted parts	Stainless steel and PeHD
Mixing ratio	0.6/1 to 20/1 (160% to 5%)
Mixing accuracy (%)	+/- 1
Maximum number of gun to be fitted	1
Mixed fluid output (cc/min)	100 - 2000
Fluid viscosity (cps)	30 - 5000
height (cm)	60 (control cabinet) - 77 (mixing unit)
Width (cm)	60 (control cabinet) - 60 (mixing unit)
Depth (cm)	40 (control cabinet) - 77 (mixing unit)

CYCLOMIX™ Expert

Cyclomix Expert is an innovative, industrial solution that is configured to meet the needs of the customer. The innovative dosing process – ultra fast injection valve – offers unequalled mixing quality and dosing accuracy.

Supplied without pumps or guns to be ordered separately
Designed to supply one gun only

non explosive area

explosive area

- Capable of metering 1 component as well as mixing 2 and 3 component materials
- Flexible modular design - up to 24 programmable components
- PH version available for acid-catalyzed coatings
- Handles up to 50 recipes
- Constant flow technology

FEATURES	BENEFITS
Automatic component management up to 24 components in 1, 2, 3 components and solvent	Innumerable possibilities Flexibility when changing materials
Real time display of instant real ratio and flowrate	Continuous process control
No pre-mixing chamber: optimized fluid passages w/o retention zones	Perfect flushing Prevent fluid waste
Stainless steel design	Compatible with water-based materials
Frequency configuration before flushing at the end of potlife	Mixed material and solvent savings Safe operation
Emergency pneumatic manual flushing	Perfect flushing in case of power supply cut-off
Batch mode	To easily get small quantities of mixed materials for touch-up works
Adaptable programming for each color	Ideal application for each color
3 data access level upon each operator	Safety use
Assisted data and tolerance product manufacturer specification entry	Quick and easy data entry eliminating any errors
Color man/machine interface	User friendly
Standard monitoring of 2 guns (2 priming - 2 flushing)	Possibility to manage 2 workstations simultaneously (1 or 2 guns or both)
Ratio check	Safe operation Full operator safety
6 different flushing sequences (air-solvent es standard) Volume or time flushing Multiples solvent choice for each recipe	Solvent consumption optimization upon recipe Optimized flushing
Magnetic injection volume adjustment - electro magnetic valves	Mixing optimization upon ratios Increase of injection frequency
USB data storage Batch number management	Production Follow-up optimization
Various Product mesurement technology: mass or gear	Handles a large range of materials

SPECIFICATIONS

Voltage (V)	115 - 230
Number of fluid inlets	24
Trigger air pressure (bar mini)	4
Operating pressure (bar)	5 - 200
Mixing ratio	0.6/1 to 30/1
Mixing accuracy (%)	+/- 1 %
Mixed fluid output (cc/min)	50 - 6000
Fluid viscosity (cps)	30 - 5000
Wetted parts	Stainless steel and PeHD (option 316L)
Width (cm)	100 (3K) - 89 (2K)
Height (cm)	119 (3K) - 91 (2K)
Weight (kg)	48 (2K) - 68 (3K)

CONTROL BOX CHARACTERISTICS

Width (cm)	60 (control cabinet) – 89 (mixing unit 2K)
Height (cm)	60 (control cabinet) – 91 (mixing unit 2K)

General informations

Fluid regulators

Regulation technology

The driven regulator technology consists in flow controlled by an air pressure regulator. The air pressure is applied on all the regulator diaphragms where a manual spring pushes on a limited surface. The high performance diaphragm delivers very high precision even at low pressures. It also brings fast response time to robotic applications.

REMOTE control

FAST response

HIGH precision

Fluid pressure regulators are used to reduce and balance the fluid pressure delivered from a pump. Regulators are designed to deliver constant fluid pressure based upon the inputs or setting of the regulator. Fluid regulators should be placed as close as possible to the point of application.

The fluid regulator closes and stops fluid flow when the downstream pressure in the hose of the regulator is greater than the set regulator pressure.

The input fluid pressure should be approximately 40% higher than the regulated pressure. For good control in a pneumatic regulated system, a stable air supply is required. Fluid supply pulsation should be minimized to help ensure ideal regulator function.

FLUID FLOW

Force equilibrium unbalanced: the air piston doesn't move; the piston ball check "Inlet Material" is closed by the fluid pressure.

PRESSURE DROP

As soon as a pressure drop occurs in the system the regulator piston moves with air pressure by opening the ball check and allowing material to flow in chamber 2.

Manual control

LOW PRESSURE REGULATOR - MANUAL CONTROL

Made entirely out of stainless steel, easy to flush.

SPECIFICATIONS

Pressure range (bar)	Inlet	40 max.
	Outlet (upon version)	0.5 - 4
Weight (kg)		1.3
Width (cm)		8.5
Height (cm)	Large passages	17
	Small passage	16.5
Wetted parts		Stainless steel, PTFE, carbide

FITTINGS

DE37 Purifier-regulator

Usually fitted in the paint spray booths. Its twin-body construction ensures completely water and oil free.

Technical characteristics:

- Maximum operating air output: 37 m3/h
- Maximum operating air pressure: 10 bar
- Height: 290 mm
- Air inlet opening: F1/4"G

Standard equipment:

- One regulated pressure gauge
- One F1/4"G
- One tap valve F1/4"G
- Two air outlet taps: M 1/4" NPS

Specifications

Air output (m ³ /h)		37
Maximum fluid pressure (bar)		10
Height (cm)		29
Fitting	Air Inlet	F8 x 13G
Set-up		1 regulated pressure gauge 1 valve F 1/4" G 1 ball valve F 1/4" G 2 air outlet taps M 1/4" NPS

AVAILABLE DE37 CONFIGURATIONS

Description	Part number
Purifier with DE 37 regulator	015.240.000
Blue cartridge filter for water	015.230.500
Red cartridge filter for oil	015.230.200

Regulators, filters and lubricators

Part 1

Part 2

Regulators with pressure gauges, filters and lubricators with polycarbon reservoirs are all modular, allowing you to put together the best air treatment equipment for your needs.

- Filter with trunnion deflector, transparent polycarbon reservoirs (heat resistant up to 50°C), manual bleed and a bronze filter capable of holding all particles larger than 5 microns.
- Regulator with pressure gauge: self-regulating and vibration free, pressure gauges from 0 to 12 bar/180 psi, equipped with automatic decompression system
- Lubricator with transparent polycarbon lid (heat resistant up to 50°C), flush adjustment screw; it lubricates by fine vaporisation
- Maximum operating pressure: 12 bar/180 psi

REGULATORS, FILTERS, LUBRICATORS CONFIGURATION (PART 1)

Type	Inlet diameter	Outlet diameter	Output at 9 bar (l/mn)	Part number
Regulator with gauge				
M 150/2	1/4"		1000	004.601.100

Cyclix™ drum cover agitators

This elevator-agitator for 20-40 to 200 L drums features a double-effect jack for a fast lift of a stainless steel cover fitted for a quick material drum change. The cover is equipped with a motorized agitator fitted with blades for low viscosity materials and a full stainless steel rod.

The elevator is coming on a large fixing plate which makes it very stable and easy to install in paint kitchens, existing installations or an essential component of new installations.

- **Constant quality of mixed materials**
- **Stainless steel wetted parts**
- **High ROI - no product loss**

FEATURES	BENEFITS
Stainless steel (agitator cover, suction and drain rods)	Compatibility with all materials
Adjustable suction rod height	No product loss
Suction and return tubes	Suitable for recirculating
Double effect jack with 3 positions command lever: up, stop, down	Important flexibility
The agitator cannot work during elevator movements	Security

SPECIFICATIONS

AGITATOR NAME	CYCLIX™ 20-40	CYCLIX™ 200
Capacity (L)	20 - 40	200

Description	Part number
Perforated rack with brackets	056.100.199

Magma 500

Material fluid heater is an auxiliary device used for material preparation and air heating. Higher layer thicknesses can be achieved by heating the material, as well as shorter drying times and higher finishing quality.

- High pressure for heavy duty applications
- Excellent performances even without Fluid recirculation
- Stainless steel design and Explosion proof, compatible with most coatings

WARM UP PRODUCTIVITY

FEATURES	BENEFITS
Standard Stainless steel design	Compatible with water-based materials
Thermometer integrated into the command box	Direct information on the desire temperature
Flexible positioning of the heat exchanger connections	Easy implementation
The highest fluid passage volume of the market	Insure outstanding performances even when using as one pass (without recirculation)
Possibility of heating atomizing air	Increase finishing quality and regrease drying times
ATEX Compliant	Can be used in hazardous atmosphere
Weather resistant	Always efficient even in high humidity environments

SPECIFICATIONS

HEATER NAME	MAGMA 500 ID9			MAGMA 500 ID14			
Maximum fluid pressure	500 bar (7 250 psi)						
Fluid passage volume	0.225 L (0.0594 gal)			0.390 L (0.130 gal)			
Internal diameter	9 mm (0.35")			14 mm (0.55")			
Fluid passage length	354 cm (140")			253 cm (100")			
Voltage range (V)	115	230	400	115	230	400	480
Maximum fluid temperature	85 °C (185 °F)						
Temperature classification	T4						
Wetted parts	Stainless Steel						
Weight	17,6 kg (38.8 lbs)						
Explosion Proof	II 2G Ex db IIB T4 Gb						
Dimensions (H x L x l)	405 x 220 x 180 mm (16 x 8.7 x 7.1 in)

Circulation accessories

Y- FITTING - STAINLESS STEEL

Allowing paint circulation on the gun while maintaining ease of use. Remote set-up possible using an additional hose.

Y-FITTING PART NUMBERS

Description	Fittings on gun	Hoses thread	Part number
Stainless steel Y-fitting - for air spray guns	F 3/8" NPS	M 1/4" NPS	129.029.915

FLUID LINE - CIRCULATION VALVE

A circulation valve allows paint recirculation at the pump bottom (piston pump) and permits to set the perfect output for material circulation.

Max. fluid pressure = 240 bar

CONFIGURATION OF CIRCULATION VALVE

Version	Material	A. Inlet fitting	Outlet fitting		D. Purge	Flushing valve	Flushing rod M 18x125	Part Number
			B. Pump intake	C. Suction rod

Description	Part number
Maintenance kit for recirculation valve	049.220.450

CTM Color Change Valves

CTM are designed for a rapid color change.

- No dead zone inside CTM reducing flushing time and solvent consumption
- PTFE seals
- Design allows modular expansion
- Monostable valve normally closed
- Visual Opening detector
- Two valves per module (the solvent valve should be facing the fluid outlet)

How to build your complete assembly upon the number of colors:

NB OF MATERIAL UP TO	NUMBER OF ELEMENT TO ORDER				(E) ROD ASSEMBLY SIZE
	(A) END MODULE	(B) INTERMEDIATE MODULES	(C) OUTLET FLANGE	(D) FIXING SQUARE KITS	
2		-			FOR 1 MODULE
4		1			FOR 2 MODULES
6	1	2	1	1	FOR 3 MODULES
8		3			FOR 4 MODULES
10		4			FOR 5 MODULES

CTM VALVE SPECIFICATIONS

Description	CTM
Max pressure (bar)	8
Ø of passage (mm)	8
Trigger air	for hose 2.7 x 4

	For 5 modules (1 end + 4 intermediate + 1 flange)	10	155.535.650

Rod's

A suction rod will transfer the paint from the drum to the pump inlet

Please refer to your pump information to know which suction rod will fit

NOTA : A suction rod will include a strainer and a flushing rod not

Fluid hoses

SAMES KREMLIN's fluid hoses bring unique advantages to the end user as they are exceptionally lightweight and flexible.

- Exceptionally flexible
- The lightest hoses on the market
- Premium quality for guaranteed safety

WWW

Fluid hoses are available with fittings up to 20 meters and without fittings above, so you can cut at the exact length needed and crimp by your own using spare fittings below
 SAMES KREMLIN Equipments using a 1/4" NPS fitting: S3, A35, A25
 SAMES KREMLIN Equipments using a 3/8" NPS fitting: FPro, A29, PMP150, Airspray Tanks, 02C85

SAMES KREMLIN's fluid hoses bring unique advantages to the end user as they are exceptionally lightweight and flexible.

- The lightest hoses on the market
- Exceptionally flexible
- Premium quality for guaranteed safety

Air hoses are available with fittings up to 30 meters.
Air hoses are available with no fittings on long distance, so you can cut at the exact length needed and crimp by your own using spare fittings below

RC 756 respirators

Lightweight, comfortable respirators efficient for each type of paint and compliant with the latest european norms (Respirator: EN 140, Filters: EN 14393).

FEATURES	BENEFITS
Equipped with large inlet and outlet valves	Easy breathing
Double fixing straps	Comfortable
Double filters	Performance (large diameter), visibility and high level of safety
Three high performance filters type available (solvented, water-based or multi with isocyanate materials)	For an optimal protection whatever the type of paint used

CONFIGURATION OF THE RC756 RESPIRATOR

Description	Part number
RC 756 respirator	143.380.100
RC 756 respirator for SOLVENT-BASED PAINTS - A1 filters	143.380.200
RC 756 respirator for WATER-BASED PAINTS - A1B1P3 filters	143.380.300
RC 756 respirator for PLURAL COMPONENT PAINTS - ISOCYANATES - A1B1E1K1P3 filters	143.380.400

FILTERS AND PRE-FILTERS

Description	Type	Quantity	Part number
Filters for solvented paints	A1	10	143.380.210

Protective hood	5	043.250.001

General informations

Paint

Decoration and protection are often two associated functions. To achieve these aims, and to re-finish products, we have at our disposal a tremendous number of surface treatments, (for example nickel or chrome plating etc).

Paint is also perfect for both of these functions. In addition, paint is universally used, and can be applied on any surface, such as wood, metal, stone, leather, plastic and elastomers. Paint does not come as a finished product, and hence the quality of application will depend on all its stages of preparation, which we will call the "Painting System".

In general, the stages are as follows :

- » Surface preparation
- » Application of the coating (paints, stains, varnishes, etc)
- » Drying

Paint

Surfaces preparation

There is a wide range of physical and chemical treatments to which the surface to be coated can be subjected, before receiving the first coat. Good surface preparation is the essential base for long-lasting protection and a good visual finish on any material.

The surface preparation is often the longest, and therefore the most important task involved in coating a part.

Material	Physical preparation	Chemical preparation
Steel:	stripping, shotblasting, brushing	acid
Aluminum:	Brushing	Vapor blast
Wood:	Sanding	
Plastic:	heating	plasma torch, acid

Once treated, the surfaces should be free from :

- » particulate or non-adherent substances
- » oil, grease and moisture

To obtain the best protection against corrosion (mainly for metal), we coat with either :

- » a wash primer or
- » an anti-corrosion paint

A **wash primer** is a liquid product of around 16s CA_4 , which should be sprayed in a thin coat, to get into all the imperfections in the surface of the metal. The phosphoric acid which it contains attacks the surface of the metal and forms an isolating and impenetrable layer of phosphate. The wash primer is highly valued for its adhesion to the metal. Importantly, it should then be coated with a layer of paint, which plays the role of a protective shield.

An **anti-corrosion** paint is a product which should be sprayed in a thicker layer than the wash primers. Containing anti-corrosive elements, it has the advantage of protecting the metal both physically and chemically at the same time. Also, it saves time, as a single coat applies both the anti-corrosive chemicals and the protective shield to the metal.

These paints are used very frequently on metal framework, as the coating can be left as it is, or covered subsequently with the desired paint finish.

16s CA_4 40s CA_4

Paint

Looking at a painted object will tell us that paint is hard. However, the paint which we spray is a liquid.

This transformation is due in the main part to several components of paint whose functions are described below.

Components of paint

Paint contains one or more substances which are generally dissolved in a solvent (or in water) and which regain their solid consistency after drying on the surface.

Amongst these substances, we find :

- » Binders
- » Pigments
- » Fillers

The binder is generally a more or less transparent body which resembles a resin. Dissolved on its own in a solvent it produces a lacquer:

Binder + Solvent = Lacquer

Paint often bears the name of the type of solvent on which it is based (cellulose paint is based on a cellulose solvent). To darken the finish, we add highly colored and very fine powders, which we call pigments:

Binder + Solvent + Pigments = Paint

Dry and wet layer

GLOSSARY

» **Sticky film :**
we say that a film is sticky when we put a finger on it and it feels like adhesive tape

» **Dust-free film :**
we say that the film is dust-free, when any dust which lands on it can be removed by blowing

» **Film that is dry to the touch :** we say that the film is dry to the touch when a finger does not leave a mark on the surface.

» **Finger-nail hard :** we say that the film is finger-nail hard when we cannot mark it. In this state, it can be polished or sanded.

Paint

Finally, to give the finish specific characteristics, we use a whole range of fillers and additives. Solvents make it possible to dissolve the other components of the paint, and can be classed into the following three groups:

» **Fast solvents** : they evaporate extremely quickly, to such an extent that the paint can dry too quickly, not allowing it enough time to adhere correctly to the surface. These solvents are never used on their own.

» **Slow solvents** : they evaporate very slowly, allowing the paint to adhere properly. They leave a soft and smooth finish. Slow solvents are not very widely used because they significantly increase the drying time.

» **Medium solvents** : they evaporate in a few seconds ; this is enough to ensure good adhesion, while giving a satisfactory drying time.

In order to make the correct paint, the manufacturer first of all makes a list of the solvents capable of dissolving all the binders he wishes to include, and then chooses those with a volatility suitable for the planned method of drying (whether at room-temperature or in an oven). Before application, paint is often reduced to give a consistency which is ideal for the task.

Paint consistency

Viscosity

The consistency of the paint should be adapted for the type of application. It is identified by the extent of its viscosity, which is expressed in centipoises or by measuring the time in seconds that it takes for a certain amount of paint to run through a calibrated viscosity cup. There are different viscosity cups used for measuring the viscosity of paints. The table below shows the relationship between cup size and viscosities in Centipoises.

AFNOR 4 (CA4)	ISO 4	mPas.s	Centipoises	Ford 4 (CF4)	DIN 4 (D°)	CH (Fr)	ZAHN (n°2)

70	-	220	220	62	52	19	-

Nota: 1 poise = 100 centipoises and 1 mPas.s = 1 centipoise (If the density of the paint is equal to 1 and if it is a fluid Newtonien, that is to say no thixotrope).

The effect of temperature on viscosity

Viscosity of paint changes with variations in temperature; basically, the resins are far more fluid when they are hot.

The table below shows the changes in viscosity of a glycerophthalic paint as the temperature varies. It is worth noting that a paint which has a viscosity of 22s at 68°F will have a viscosity of 28s at 54°F and of 17s at 90°F.

	Temperatures (°C)																			
	2	4	6	8	10	12	14	16	18	20	22	24	26	28	30	32	34	36	38	40

	122	108	90	85	75	66	59	53	47	42	38	35	31	28	26	24	22	21	19	18
	132	120	102	90	80	70	63	55	50	44	40	36	33	30	27	25	23	22	20	18
	142	124	108	95	84	74	65	58	52	46	41	37	34	31	27	25	23	22	20	18
	152	132	119	101	90	80	69	61	54	48	43	38	35	31	28	26	24	23	21	18
	164	140	123	106	94	83	73	64	56	50	45	40	36	32	29	27	24	23	21	18

Example : at a temperature de 20°C for an announced viscosity of 22s, you should be ready for the following results:

- at 12°C, a viscosity of 28s,
- at 32°C, a viscosity of 17s.

Paint

Quality problems tend to arise when the temperature of the paint changes during the course of the day. For example : During the course of this day, the viscosity of the paint has moved from 23 to 17 seconds, which leads to a 22 % increase in the output of the spray guns, leading to over-coloring and excessive product consumption.

	Temperatures (°C)	Viscosity - CA4 (seconds)	Spray gun output (cm3/mm)
morning, cool workshops	15	23	460
Later - workshop heats up	20	20	520
An oven switched on	25	17	560

Worse still, paint prepared in a hot workshop at 20 seconds can be at 28 seconds the following morning, before the workshop has got up to full working temperature: this would lead to a less fine spray and a much greater drying time.

Drying of paints

he component of paint can be classed in two groups :

» Dry extracts

» VOC (Volatile organic compounds), or water in case of water-based paints

Drying paint is all about allowing the volatile products to evaporate and the film to harden. We must distinguish between hardening and drying.

Drying gives us the dry film purely by the evaporation of the volatile products. This happens at two stages: during spraying and within the film. Depending on the temperature, the density of the spray, the type of spray gun and the distance of the spray, the paint can arrive on the surface more or less dry. That means that the majority of the solvent has evaporated before the paint reaches the surface. The drying of the wet film is accelerated when the surface is in a well-ventilated area which has dry air and is dust-free.

Practicals pages

Choosing a pump

To optimize

- For the best pump capacity, first work out the output you are going to require. This will include the sprayguns themselves, and any circulation you plan to have within this system. Once you have this figure, multiply by 1.2, and then choose the pump of which output at 30 cycles per minute is the nearest.
- The compression ratio you will need is defined by the pressure losses due to the length and diameter of the hosing of your system. To calculate these pressure losses, see page 99.

Example

let say you want to feed 3 conventional guns with an output of 500 cc/mn each, plus a circulation of 0,5 l/mn.

The total output will thus be 2 l/mn. The optimal pump capacity would be: $(2\ 000 \times 1,2) \div 30 = 80$ cc/cycle.

The best-suited pumps will be :

- » the PMP 150 (output of 100 cc/cycle and pressure ratio of 1:1) for low viscosity materials and a small circulating (pressure loss < 3 bar).
- » the 02.75 (output of 85 cc/cycle and pressure ratio of 2:1) for thicker materials and a normal circulating (pressure loss < 6 bar).
- » the 04.120 (output of 240 cc/cycle and pressure ratio 4:1) for large pressure loss in circulating (up to 15 bar).

Pump Material Feeding

To guarantee the right delivery of product, we offer the following range of equipment for various product viscosity :

- » 0 - 300 cps
 - suction rod.
- » 300 to 8 000 cps
 - top outlet pressure pots,
 - pumps (gravity or suction rod),
 - pump with base intake valve.
- » 8 000 to 15 000 cps
 - bottom outlet pressure pots,
 - pumps with suction rods,
 - compressor.
- » 15 000 to 30 000 cps
 - no more pressure pot,
 - no more suction rod,
 - submerged hydraulic pump,
 - compressor,
 - pump with single action elevator.
- » 30 000 à 1 000 000 cps and +
 - pumps with peak feeder and double action elevator.

Pressure loss in fluid hoses

Pressure drop is the resistance that prevents material from moving forward in the pipe. Two pipe variables influence this resistance : the (inside/internal) diameter and the pipe length. The pump will generate a pressure, strong enough to move the fluid material through the pipe (or hose) to the material pipe outlet. This pressure must be enough to overcome the original pressure drop. While it is hard to reduce the pipe length, it is relatively easy to select an appropriate internal pipe diameter.

PRESSURE DROP CALCULATION

$$\text{Pressure loss (bar/m)} = \frac{6.9 \times \text{Flow (l/min)} \times \text{Viscosity (cps)}}{D^4 \text{ (int dia in mm)}}$$

$$\text{Pressure loss (psi/Ft)} = \frac{2.73 \times \text{Flow (gpm)} \times \text{Viscosity (cps)}}{D^4 \text{ (int dia in inches)}}$$

FLOW RATE CALCULATION

$$\text{Flow (l/min)} = \frac{\text{Pressure loss (bar/m)} \times D^4 \text{ (int dia in mm)}}{6.9 \times \text{Viscosity (cps)}}$$

$$\text{Flow (gpm)} = \frac{\text{Pressure loss (psi/Ft)} \times D^4 \text{ (int dia in inches)}}{2.73 \times \text{Viscosity (cps)}}$$

PIPE DIAMETER CALCULATION

$$\text{Interior Dia (mm)} = \sqrt[4]{\frac{6.9 \times \text{Flow (l/min)} \times \text{Viscosity (cps)}}{\text{Pressure Loss (bar/m)}}}$$

$$\text{Interior Dia (in)} = \sqrt[4]{\frac{2.73 \times \text{Flow (gpm)} \times \text{Viscosity (cps)}}{\text{Pressure loss (psi/Ft)}}}$$

Pressure loss in air hoses

Electrostatic spraying : suitability of the equipment depending on the resistivity of the paints

- The wrap-around affect is optimized with paints of resistivity range of 5 - 50 MΩ.cm.
- Specific hoses allows for wrap-around effects for resistivity range higher than 2MΩcm.
- For water-based materials (0 MΩ.cm), a special Isocube enclosure allows to benefit from all the advantages of electrostatic spraying in complete safety.

List showing the compressed air consumption of normal air tools

We generally multiply the instant consumption by a coefficient of 0,5 to 0,9 to allow for the time the tool is not in use.

The average air volume delivered by a compressor of 1 CV is of 8 m³/h.

Tool	Consumption	
	l/mn	m³/h
Projection equipment	800 at 1 800	48 at 108
Riveter	450 at 1 500	27 at 90
Pneumatic drill	600 at 1 200	36 at 72
Linisher Ø 230	1 200 at 4 000	72 at 240
Drill 13 mm	600	36
Rotating sander	200 at 400	12 at 24

Tool	Consumption	
	l/mn	m³/h
Conventional gun	160 at 500	10 at 30
AIRMIX® gun	67 at 134	4 at 8
Pumps	160 at 1 350	10 at 80
Blower	200 at 400	12 at 24
Screwdriver	200 at 400	12 at 24

Calculate exactly the maximum air consumption of pump in l/mn : Q

The formula is :

$Q = 1.2 \times \text{fluid output} \times \text{pressure ratio} \times (\text{air motor feeding pressure in bar} + 1 \text{ bar for atmosphere})$

Example for a pump 16.120 : $Q = 1.2 \times 4,8 \times 16 \times (6 + 1) = 645.12 \text{ l/mn}$ or $(645.12 \times 60) : 1000 = 38.7 \text{ m}^3/\text{h}$

Practicals pages

Value of « PH »

The pH value of a liquid or a solution quantifies its concentration of hydrogen ions and tells us the extent to which it is acidic or alkaline. The PH value dictates the best materials to be used in construction of major paint handling and spraying equipment.

Bond | Protect | Beautify

With our manual guns, automatic and robotic applicators, supplied by our wide range of pumps & machines for fluid handling, dosing, mixing & dispensing.

SAMES KREMLIN provides industrial solutions for production increase, quality improvement, material & cost savings.

We are designers and manufacturers of process equipment that is divided into **6 ranges**:

Airspray: Since 1925, we have been an Airspray manufacturer bringing you the very best in finishing.

Airmix®: Creator of Airmix® Technology since 1975, we provide the perfect mix between quality and productivity.

Airless®: We provide premium Airless Products for finishers with demanding applications.

High Viscosity: Pumping beyond possible, dispensing precisely.

Electrostatic: expertise for high finishing quality & efficiency.

Powder: Powder coating solutions for the highest Productivity since 1960.
